

2020 Green Communities Criteria

Criterion 1.2 Integrative Design: Charrettes and Coordination Meetings

Project Name & Address: _____

An integrative process moves the research and learnings of the Project Priorities Survey into action. When completed early enough in the design phase, a successful integrative design process can positively influence design decisions, which may support substantially lower development costs and greater health, economic, environmental, and social benefits for residents, property owners, and communities.

1) Collaborative meeting formats should be prioritized as part of the project’s integrative design process. Select from the list below which type of collaborative meeting format was used for the project AND attach the meeting minutes for at least one collaborative meeting.

- Green charrette(s)
- Preconstruction coordination planning meeting(s)
- Construction coordination meeting(s)
- Resident engagement/community meetings
- Other: _____

2) These collaborative meetings should be used in some combination to accomplish the following objectives. Select those which have been achieved:

- Productively and regularly engage residents and/or community members
- Include lessons learned from existing projects
- Identify green and resilience objectives for the project
- Complete a 2020 Enterprise Green Communities Criteria checklist with the entire design and development team
- Coordinate pre-development research and work
- Confirm that the documents (plans, specifications, scope(s) of work) reflect the completed 2020 Enterprise Green Communities Criteria checklist, as the project transitions from Design Development to Construction Document phase
- Confirm that green objectives for the project are incorporated into design

3) Based on the collaborative meeting formats convened and activities accomplished in these meetings, provide a narrative describing at least one multi-benefit strategy aimed towards achieving a variety of green, health and well-being, environmental resilience, and/or community/social resilience goals. Your narrative may be included in the space here or as a separate document attached.

4) Provide an example of how the team is assigning/tracking responsibility for agreed upon tasks to create accountability:

NOTE: You are not required to provide answers to question 5 and 6. Any answers that are provided will not be evaluated for compliance for certification but will help us understand how affordable housing developers are considering these issues in their projects.

5) Describe how existing or potential residents have been involved throughout the pre-development process. Include an example of how this involvement was reflected in green objectives set. _____

6) Describe how equity and climate change were considered throughout the decision-making process for the project design. _____
